

EMC® Retrospect® 7.5 for Windows Professional Edition

Backup and Recovery Software

Data Protection for Home Networks and Small Offices

When it comes to protecting your home or small office computers, nothing beats EMC® Retrospect® Professional Edition. That's why Retrospect consistently takes top honors from the experts you trust.

What happens if you mistakenly delete or overwrite a file, a virus infects your computer, or a hard drive fails? Will you lose precious family photos, e-mails, contacts, important business documents, or your tax returns? Retrospect automatically protects everything on your computer. It can recover past versions of a file or return your computer to a prior point in time.

Protect networked computers

EMC designed Retrospect for Windows Professional Edition to make it easy to protect your personal and business data. Out of the box, Retrospect protects the PC it is installed on and two networked desktop or notebook computers. Optional client licenses extend protection to additional networked computers.

Simple, yet powerful

Answer a few simple questions and Retrospect will have your first backup running in minutes. Protect Windows, Macintosh, and Linux desktops and notebooks instantly at the push of a key, or automatically at times convenient for you.

Secure, reliable protection

Protect documents, photos, music, e-mail, contacts, business records, games, applications, operating systems, device drivers—everything! Store backups on hard drives, tapes, or CD/DVDs and use government-certified AES 128/256-bit data encryption to prevent unauthorized access.

Fast backups and Smart Restores™

Back up and restore quickly with unparalleled accuracy. Retrospect's patented technology only needs to back up new or changed data. There are no time-consuming weekly full backups or complex procedures. If you accidentally delete files or lose data due to a computer problem, simply choose a past point in time, select the files you need, and let Retrospect do the rest. And unlike other software, Retrospect's Smart Restores won't return unwanted files and folders—just the exact data you need.

Automated disaster recovery

Restore a non-bootable Windows PC. If a virus or other disaster brings your backup PC to a halt, Retrospect will save you hours reinstalling software and reconfiguring your computer. Simply create a disaster recovery CD from your existing backup media. Use the CD to boot your computer and restore it to any day it was backed up.

EMC Retrospect Continuous Backup Professional **NEW!**

EMC Retrospect Continuous Backup Professional add-on is designed for consumers, small business users and corporate individuals looking for transparent data protection on laptop and desktop computers. For the novice user, Retrospect Continuous Backup Professional protects the most common user data right out of the box, and for the more experienced user, it is easy to configure personalized protection policies and retention periods.

EMC® Retrospect® 7.5

for Windows Professional Edition

Data Protection for Home Networks and Small Offices

Diogenes Labs/ Storage Magazine Quality Awards September 2007

"In the small to medium-sized business (SMB) category, EMC Retrospect returned to the top spot after a one-year hiatus."

Macworld Magazine February 2007

"...no other Mac backup program can hold a candle to Retrospect 6.1. If you want to back up a small network, it's the best choice, by far."

PC World January 2007

"Retrospect Express HD's keep-it-simple, set-it-and-forget-it philosophy rapidly won me over."

Windows IT Pro Readers' Choice 2006 Award September 2006

EMC Retrospect for Windows wins Top 3 Award in Backup and Recovery category.

VARBusiness Magazine August 2006

EMC Insignia Solution for Data Protection Honored by CMP'S VARBusiness Magazine

Simple, yet powerful

User-friendly wizards	Installs in minutes. Backups and restores are easy.
Instant or scheduled backups	Back up at any time or automatically on a daily, weekly, or monthly schedule. Need immediate protection? Back up instantly with a push of a key or a click of your mouse.
Automatic device detection	Retrospect recognizes supported backup devices and configures them automatically, eliminating the need to locate and install device drivers.
Automatic software updates	Retrospect checks for updates when you connect to the Web and notifies you if they are available for download and installation.
508 compliant	Retrospect meets U.S. government section 508 requirements for the disabled and visually impaired.

Secure, reliable protection

Windows Logo-certified	Retrospect is certified by Microsoft for use on Windows-based computers.
Protects desktops and notebooks	Retrospect for Windows Professional Edition runs on a Windows computer and can protect two additional networked desktop or notebook computers running Windows, Mac OS X, Red Hat Linux, or SUSE Linux. Add a Retrospect client-pack to provide centralized, automated protection for additional computers.
Protects open files on Windows XP	Protect files that are open and in use on PCs running Windows XP, including files in use by Windows applications such as Microsoft Outlook.
NEW! Continuous Backup	Optional add-on protects all your important files by making copies every time changes are saved. Only the incremental changes within a file are stored, conserving disk space. Optional use of external or network storage provides additional protection, and a simple right-click can recover any saved version of a file.
Backup to disk, tape, or optical devices	Back up locally and over the network to internal disk drives or FireWire and USB external hard drives; tape drives including AIT, DATA, DLT, LTO, Travan and VXA; CD/DVD drives including CD-R, CD-W, CD-RW, DVD-R, DVD-RW, DVD+R, DVD+RW; and removable disks including REV, Zip, DVD-RAM, MO and SuperDisk.
High-security data encryption	Prevent unauthorized access to backup data with government-certified 128-bit or 256-bit AES encryption, the highest level of protection available. Or choose fast SimpleCrypt™ or DES encryption.
Simple onsite/offsite media rotation	Create two sets of backup media and rotate them offsite to guard against failure of one set or a disaster. Quickly update the media set that is rotated onsite. Archive media and replace it with a new media while still using the current set up. Retrospect makes it easy and tracks everything for you.
Compress data	Reduce the size of backed up data to conserve space on your backup media, saving you money.
Duplicates	Duplicates are useful for making exact copies of folders or disks. Retrospect's intelligent copy utility scans the source and destination so that only missing files are copied.
Archives data	Copy inactive files to backup media and remove from computer hard drive if desired.

Fast backups and Smart Restores™

Flexible choices	Back up your entire computer (recommended) or just the files and folders you select.
Patented Progressive Incremental technology	Retrospect rapidly compiles a complete list of files on your computer prior to every backup and then compares the list to your backup media. Only new or changed data is then backed up. Other backup applications require a complex series of full, incremental, and differential backups. With Retrospect you can perform fast incremental backups forever, saving time, money, and aggravation.
Point-in-time restores with unparalleled accuracy	Retrospect Continuous Backup protects all your important files by making copies every time changes are saved. Only the incremental changes within a file are stored, conserving disk space. Optional use of external or network storage provides additional protection, and a simple right-click can recover any saved version of a file.
Automatic grooming of disk backups	Remove older backups on disk automatically to ensure sufficient space for new backups. Simply turn on Retrospect's unique data grooming feature and specify the number of backups you want to keep on your computer or an external disk. Retrospect takes care of the rest.
Data filters	Save time and space by excluding certain types of data, for example temp files or videos.
Backup data and media verification	To avoid costly surprises, Retrospect quickly scans the backup media to make sure data has been copied correctly. You can verify data as it is being backed up or after backups are complete.
Powerful search capabilities	Find files on the backup media quickly using search criteria. Restore them to their original location or a new location. Recover all previously backed up versions of a file.
Clear error notification	Detailed backup history allows you to make sure that backups are being performed as planned. Receive easy-to-understand alert messages so you can take corrective action to resolve any backup errors.
Single-instance storage	Retrospect backs up only one copy of duplicate files that reside on multiple networked computers, saving considerable time and space on the backup media.

Automated disaster recovery

Non-bootable PC recovery	Use Retrospect to periodically create a disaster recovery CD for the Windows XP computer it resides on. If a virus or other problem causes your PC to stop functioning, don't panic. Insert the CD, boot the computer, and use Retrospect to automatically restore your entire PC—including the operating system, applications, device drivers, personal settings, and all data—to a point in time.
